

# Zehnder Comfosystems

## A Total Solution

We offer a fully integrated support package to our customers where our aim is to partner with you and you build/installation throughout the process. We are not just a supplier of brown boxes to site.

Our approach works through a number of stages so that we ensure all elements of Regulations and standards are achieved and above everything, your requirements are captured:

### Consultation

We will begin by having initial discussions about the requirements for your building design.

### Design & Quote

We will provide outlined CAD plans in line with Best Practise requirements of your build standard: e.g. Code for Sustainable Homes, PassiveHaus, Eco-Homes. At this time, we also provide a detailed quote of the system and components required.

### Supply

Following order placement, we will organise safe delivery to site of your systems and ancillaries in line with your build plan and installers.

### On-site support with your installers

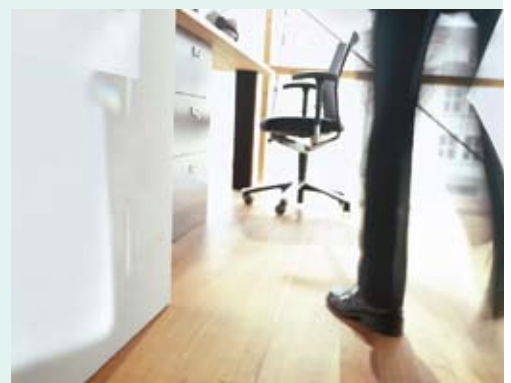

We have developed in-depth and simple to follow installation instructions, however we are always available to come to site and help support installers to ensure it gets done right first time. This includes commissioning the systems within the dwelling so that it delivers on performance and most importantly, comfort for you and your family.

### After installation support

If for any reason, you have a problem with your whole house ventilation system or energy centres, we can offer advice and support over the phone or in person with you and your installation team.

Each project that we work on is individual to us and is tailored to suit.

**If you are looking for a partner, that's us. We are don't want to just supply brown boxes, we want to provide comfort systems for your eco house, help you reduce your carbon footprint and reduce the running costs of your home.**

### Zehnder Group

With over 100 years in the production of radiators and 40 years in ventilation technology Zehnder has become a complete solution provider for heating, cooling and fresh air all around Europe. Today, Zehnder has factories on three continents and manufactures to the highest quality to ensure comfort and satisfaction with all of its customers.
